PROFILE

Trilingual (NL/EN/FR) Microsoft developer with 5+ years of hands-on experience building solutions across the full Microsoft stack — Power Platform (Canvas and Model-Driven Apps, Power Automate, Dataverse), SharePoint Online (communication and team sites, information architecture, governance) and Dynamics 365 Customer Engagement, extended with .NET plugins, PCF components and integrations via Azure Logic Apps, Functions and the Dataverse Web API. **Currently engaged on a Dynamics 365 platform-takeover and AI-optimization assignment for the Flemish Government via DXC Technology, following a Power Automate / Power Automate Desktop automation engagement at a European Union institution via RoboRana.** Strong on data modeling, security, ALM with Azure DevOps and Power Platform Pipelines — focused on delivering robust, maintainable and well-documented solutions hands-on, in close collaboration with architects, functional analysts and fellow developers in Agile / Scrum teams.

PROFESSIONAL EXPERIENCE

Senior Power Platform & D365 Developer DXC TECHNOLOGY · FLEMISH GOVERNMENT

📅 03/2026 — Present

- **VKO procurement solution** — Designed and built an end-to-end Model-Driven App on Dataverse for the Flemish Mobility & Public Works department, handling small procurement requests from creation through decision tree, approval, ordering, delivery and settlement — replacing scattered Excel/email/SharePoint follow-up.
- **Process & status automation** — Built the Business Process Flow (8 stages) with Power Automate cloud flows on Dataverse webhook triggers that keep the record status in sync with the active stage, fire stage-based notifications (in-app + deep-link emails into the dossier), and drive gate flags and economic-account logic.
- **Custom form logic (JavaScript / Xrm.WebApi)** — Wrote web-resource JavaScript for a required-field stage-gate that blocks progression until the right fields are filled (modal grouped per tab + guided field-by-field navigation), a conditional decision-tree tab, and enterprise-number (KBO, modulo-97) validation.
- **Config-driven UI & data modeling** — Modeled tables, columns, global option sets and business rules; used a reusable JSON config engine to conditionally show/hide/lock tabs, sections and fields per status (phased visibility, read-only settled dossiers); authored Python tooling against the Dataverse Web API to build and patch schema, BPFs and flows repeatably.

Power Platform Developer (Freelance) ROBORANA · EUROPEAN UNION INSTITUTION

📅 11/2025 — 03/2026

- **HR administration automation** — Built Power Automate cloud flows automating recurring HR administrative tasks — replacing manual handling with reliable, traceable processes across Microsoft 365.
- **Website-check automation (RPA)** — Designed and delivered Power Automate Desktop flows performing automated checks and validations on web-based

EDUCATION

- U2U — Power Apps & Automate: Advanced Patterns

SKILLS

Power Platform

Canvas Apps	Model-Driven Apps
Power Automate	Power Pages
PA Desktop / RPA	AI Builder
Custom Pages	Command Bar
Approval Workflows	BPF / Workflows
Deep Links	Xrm.Navigation
Webhook Triggers	Power BI

AI & Copilot

Copilot Studio	Copilot in D365
Autonomous Agents	Agent-to-Agent (A2A)
Agent Feed	AI Builder

Dynamics 365 & Dataverse

D365 Customer Engmt	D365 Service
Dataverse	Model-Driven
Security Roles	Business Rules
Field-Level Security	Business Units
Global Optionsets	1:N Modeling

content; implemented robust error handling, logging and run monitoring for unattended execution.

- **Process analysis & handover** — Analysed existing manual processes, identified automation candidates and produced documentation supporting handover and ongoing maintenance.

SharePoint & Power Platform Developer METALEN GALLER

 05/2025 — 10/2025

- Designed and built a modern SharePoint Online communication site — information architecture, content types, role-based access and corporate branding.
- Integrated Microsoft Teams via Viva Connections and activated Viva Engage; configured the site structure and permissions model.

Power Platform Developer GOSSELIN — LOGISTICS DIVISION

 11/2024 — 04/2025

- **Canvas + Dataverse** — Built a mobile-first Canvas App at the logistics gate (truck registration, driver identification, document scanning) backed by a Dataverse data model with business rules, security roles and automated Word-template document generation.
- Integrated SharePoint and external systems with Power Automate and Azure Logic Apps (REST/JSON, SFTP).
- **ALM** — Implemented controlled ALM using managed solutions, environment variables, connection references and Power Platform Pipelines across DEV/TEST/PROD.

Power Platform Developer HUBO BELGIUM

 04/2024 — 11/2024

- Built a 3-screen Canvas App centralising lot-offer registration across suppliers, sales/purchasing and stores — replacing emails and Excel with a structured digital flow.
- Designed an automated Organimi synchronisation via Azure Logic Apps: SFTP retrieval, CSV parsing/validation, business-rule-based OE-code mapping, error handling and monitoring.

Power Platform Developer CEGEKA BELGIUM

 10/2023 — 04/2024

- **Power Pages POC** — Developed a Power Pages Proof of Concept for secure external access — Dataverse, Liquid templates, JavaScript, FetchXML and Azure AD B2B authentication.
- Built sample Power Platform solutions and reference implementations; contributed to internal best-practice guidelines for low-code delivery.

Power Platform Developer · Dynamics 365 CRM INETUM-REALDOLMEN · PHARMA SECTOR

 01/2021 — 10/2023

- **D365 CRM / Regulated** — Delivered a Power Pages portal on Dynamics 365 CRM for a network of 400 external pharmacies — a regulated-industry engagement with strict data-protection and access requirements.
- **Security model** — Implemented Azure AD B2B authentication and a role-based access model separating internal vs external user permissions, security roles and Business Units.
- **Plugins & integration** — Extended D365 CRM and Power Pages with .NET plugins, Liquid templates, JavaScript and FetchXML; integrated with external systems and documented the end-to-end technical architecture for the delivery team.

SharePoint Online

Communication Site	Team Site
Document Libraries	SPFx
Hubs	Info. Architecture
Content Types	Permissions
Viva Connections	Viva Engage
Server-based Int.	Site Designs

M365 & Identity

MS Teams	Exchange Online
Entra ID	M365 Admin Ctr.

Development

.NET Plugins (C#)	PCF Components
Dataverse Web API	JavaScript
TypeScript	React
Python	PowerShell
Liquid / FetchXML	Node.js

Tooling

PAC CLI	XrmToolBox
Plug-in Registration	Postman
VS Code	Visual Studio

Integration & Azure

Azure Logic Apps	Azure Functions
API Management	REST APIs
Microsoft Graph	Webhooks
OAuth 2.0 / OBO	Service Principal
SFTP	JSON / XML

ALM & DevOps

Azure DevOps	CI/CD Pipelines
PP Pipelines	Managed Solutions
Solution Layering	Connection Refs
Git	Env. Variables

Power Platform Intern

APPFIE

10/2020 — 01/2021

- **Power Pages portal** — Designed and built a Power Pages portal on Dataverse to centralise project information, deadlines, statuses and assignments for internal follow-up.
- **Data modelling & UX** — Created Dataverse tables and relationships, user-friendly forms and page layouts, business rules and conditional UI behaviour to streamline the follow-up process.
- **Authentication & views** — Implemented portal user authentication and configured Dataverse views to control access and surface relevant project data per user role.
